

Skittles Rainbow

Things you will need:

- Packet of Skittles
- Warm water
- White plate

Instructions:

Arrange the skittles in a circle around the edge of the plate in one single line. Pour warm water in the centre until it reaches the skittles. Then just watch as the colours move through the water into the centre of the plate.

The science behind it:

Skittles are coated in food colouring and sugar. When you pour water over the skittles the coloured coating dissolves spreading through the water. The colour and sugar dissolve into the water, making it the colour of the skittles.
